Corona virus – Status report update 2020-04-20

The development of the Coronavirus continues, the tragic effects can be seen all over Europe and our thoughts are amongst those affected. In the last week, the situation has somewhat stabilized. The spread of the virus no longer accelerates with the pace it has previously done, and several countries are implementing reliefs to the restrictions that were implemented. At this point we believe it is even more important to make sure our company's mitigation plan is complied with and that it is efficient to make sure spread of virus and sickness is limited.

Several business segments and geographical regions have announced that industries are gradually starting up operations and production again. With successful work of keeping our staff healthy and a robust supply chain LWW is ready to produce and deliver without any constraints due to Corona.

- No covid-19 case was observed or confirmed by any LWW Group employee
- Production is running as normal
- Raw material is available
- Finished goods and raw material can be shipped in and out

Due to increased border control, new transport routes and increased administration we are observing delays in transportation. The abnormal routines and procedures are in many cases also adding costs that we need to share within the supply chain. Your local sales representative will contact you on the matter.

We must all be aware that the situation can change rapidly when the virus is developing further within Europe. Please be assured that we spend all our efforts to secure the supply. Our professional local teams will keep you informed in case of future developments, which may impact your business, in due time.

Sincerely
